Transfer threshold as part of the KÄNGURUH-SYSTEM® and hygienic transfer point between the clean and unclean sections. Threshold in robust, self-supporting and hygienic design, made of high-quality stainless steel. Transfer threshold designed for easy cleaning, for coupling-up transport trolleys with two-point locking. Threshold consisting of a lower part with holes for safe screwing to the building-side floor and an upper part that is slipped over and suitable for compensating floor unevennesses thanks to its continuously variable height. Plastic docking strips on both sides for safe docking of a transfer dolly on the clean and of a closed transport trolley on the unclean side. Undocking of the transfer dolly using a manual release on the trolley and of the closed transport trolley by means of an integrated foot pedal on the threshold.
